**SIMILAR TO i-JET
+ FREE 400G
POWDER
(VALUED AT R 900)**

Prophy Jet is a must-have device in every dental office due to its wide application and benefits in dentistry. The device is versatile, efficient, and gentle, and provides a comfortable experience for the patient. Investing in a Prophy Jet will not only improve the quality of dental care provided but also save time for both the dentist and the patient. The device is also an excellent investment in the long-term oral health of patients. Dental professionals should consider adding the Prophy Jet to their arsenal of tools to provide the best possible care to their patients.

NANOFILL UNIQUE

Unique Single Shaded Universal Composite

Nanofill unique is a universal micro-hybrid composite for direct and indirect restorations (inlays, onlays, veneers) as well as fillings of cavity class I-V. All classic vita-shades are covered thanks to the chameleon-effect of Nanofill unique. A translucency of 8% allows excellent shade matching of the restoration to the natural tooth shade of the adjacent tooth structure. Nanofill unique combines top aesthetics and good handling. It is characterized by easy modeling and optimal adaptation to the cavity walls. Highest polishability gives the finished restoration a perfect gloss. Excellent physical properties guarantee long-lasting restorations.. Surplus stock for slow turning colors is minimized, in addition to reduction of inventory. Nanofill unique enables efficient working: elimination of color definition and reduction of errors due to incorrect color selection

Compares to OmniChroma®

Available as 4g syringe

Made in Germany

Implant UV Activator

New Product Launch

It can use vacuum ultraviolet rays to catalyze and activate the surface activity of implants

- Improve the rate of osseointegration
- Shorten the time of bone healing
- Accelerate the clinical osseointegration of dental implants and improve the success rate of dental implants.
- Improve bone contact rate (BCR)
- The BCR of Non-activated implants is about 50-60% and activated implants can increase to over 90%
- Shorten dental restoration time
- Dental restoration time: Reduced from 3 months to 1 month
- Expanding implant adaptation
- Improved implant success rate for high-risk dental treatment
- Rapid activation - Activation only takes 10s
- Ozone sterilization Built-in ozone filtration to prevent leakage
- Vacuum UV
- Ultra High Implant Compatibility (S, L, M1.4, M1.6, M2.0)

R49,900

Implant Stability Meter

Grand Launching Offer

It is a stability measuring device that uses tapping method, which measures the time of the Tapping Rod of the device contacting the implant. Used for for dentistry and dental implantology or oral cavity, or abutment, to measure the stability .

The result of the measurement is displayed in iST scale (implant Stability Test), which is the numerical representation of the Implant Stability Test (iST) value, and higher scale represents greater implant stability or lower implant mobility.

Characteristics

Convenient usage due to small and light design

Easy to use due to simple controlling method

Fast measuring time less than 3 seconds

Safe measurement due to slight tapping technique and auto safety system (tapping stops after tapping twice when Osseointegration is unstable, otherwise taps up to 6 times.)

Available to check possibility of implant failure at in earlier stages

This model is much simpler to use than the NSK model. With the NSK model, you need to install a probe on the implant first. With this model, you can see the ISQ value on the display screen by gently tapping the implant. From the numerical value Determine the stability of the implant.

Implant Stability Meter New Product Launch

R25,900

2-step procedure

1. Carefully position the tip of the Tapping Rod to the upper edge of the healing abutment while being cautious not to push the abutment. When the Tapping Rod of the handpiece is located 90 degree from the side part of the top of the healing abutment and the ON/OFF switch is pressed once, the tapping motion starts after 0.5 second.

Remarks: The measured stability value is more accurate when the degree between the healing abutment and the Front Guide is closer to 90 degree. Maintain the contact angle within the range of 0° ~ 30° to upward when measuring. Due to the different bone widths in different directions of the implant, the measurement data will be biased. Try to measure the stability value from multiple angles to get a reasonable value.

2. An ISQ value is generated and shown on the LCD display. This reflects the level of stability on the universal ISQ scale -from 1 to 99. The higher the ISQ value, the more stable the implant.

If ISQ value appears as Red (01 to 59), the stability is not up to the standard.

If ISQ value appears as Yellow (60 to 64), the stability reaches the benchmark value.

If ISQ value appears as Green (65 to 99), the stability is good.

Remarks: Number of tapping: Tap 2 times until the measured value of 1-59. After 60-99, the device taps 6 times in order to measure the stability.

MAX PIEZO SURGERY III

Includes Handpiece
& Piezo Tips

R59,900

Ultrasonic frequency micro-oscillation of Max Surgery III is an ideal solution for minimally invasive surgery, ultrasonic osteotomy, and more dental diagnosis & treatment.

The Max Surgery Ultrasonic Surgical System has 4 modes: Bone Cutting, Periodontics, Endodontics Treatment, Cleaning and is equipped with various ultrasonic working tips for different applications.

Minimal incision 3.5mmx0.5mm and No damage to soft tissues are its remarkable features. Thus, ultrasonic bone cutter Also, help surgical dentists to accomplish a minimally invasive surgery precisely & effectively. The ultrasonic bone surgery device make dental patients not worry about a slow healing for the trauma of tooth extraction.

Also, it has autoclavable highly efficient handpiece, multi-function pedal for water volume adjustment, mode switching, power adjustment and autoclavable cable to avoid cross-infection.

R 1999

<https://youtu.be/kGtqo1UyFU4>

Vericom U-Bond Ortho Light Cure Adhesive for attaching orthodontic bracket. It is designed to attach ceramic & metal bracket to a tooth, and its characteristic of color change after light-cure provides easy removal of remaining resin around the tooth.

**ECO-S Fissure
sealing KIT**

Expires April 2025

R 999

Light-cured dental material designed for sealing the enamel pit and fissure of teeth for the prevention of caries. Has good properties like shear bond strength, micro-leakage and wear resistance.

Has an appropriate viscosity, to enable the sealant to penetrate the depths of pits.
